

\$BOG

bogdanoff.finance Whitepaper

Official Release

V1

QUICK RUNDOWN

- >Rothschilds bow to Bogdanoffs
- >In contact with aliens
- >Possess psychic-like abilities
- >Control France with an iron but fair fist
- >Own castles & banks globally
- >Direct descendants of the ancient royal blood line
- >Will bankroll the first cities on Mars (Bogdangrad will be the first city)
- >Own 99% of DNA editing research facilities on Earth
- >First designer babies will in all likelihood be Bogdanoff babies
- >both brothers said to have 215+ IQ, such intelligence on Earth has only existed deep in Tibetan monasteries & Area 51
- >Ancient Indian scriptures tell of two angels who will descend upon Earth and will bring an era of enlightenment and unprecedented technological progress with them
- >They own Nanobot R&D labs around the world
- >You likely have Bogdabots inside you right now
- >The Bogdanoffs are in regular communication with the Archangels Michael and Gabriel, forwarding the word of God to the Orthodox Church. Who do you think set up the meeting between the pope & the Orthodox high command (First meeting between the two organisations in over 1000 years) and arranged the Orthodox leader's first trip to Antarctica in history literally a few days later to the Bogdanoff bunker in Wilkes land?
- >They learned fluent French in under a week
- >Nation states entrust their gold reserves with the twins. There's no gold in Ft. Knox, only Ft. Bogdanoff
- >The twins are about 7 decades old, from the space-time reference point of the base human currently accepted by our society
- >In reality, they are timeless beings existing in all points of time and space from the big bang to the end of the universe. We don't know their ultimate plans yet. We hope they're benevolent beings.

Introduction

For the past 3 years, The Bogdanoff Brothers have shown themselves to be anything but benevolent beings. Through a series of elaborate ruses, they continuously shattered Wojak's dreams of making it through cryptocurrency. The endless cycle of buying high and selling low rendered Wojak both financially and fundamentally ruined. Much like his portfolio, Wojak grew more and more pink by the day.

The Bogdanoffs, showing clemency for the first time ever, has decided to mint a token on the ERC20 platform with the intent of helping Wojak. With **\$BOG**, Wojaks of the world unite to achieve the singular goal of beating the Bogdanoffs at their games and making it in the process.

However, these formidable beings were never known for showing mercy to the weak. In order to make it, Wojak would have to prove his worth to The Bogs. In other words, he cannot commit the same mistakes as before and must find a way to somehow outsmart The Bogs.

Can he beat The Bogs this time?

The token mechanism will be laid out in further details below

Tokenomics

Total: 18,000,000

BogdaVault (Initial): 3,000,000

Uniswap Liquidity: 1,200,000

Presale: 1,200,000

Team: 600,000 (locked for 3 months)

Marketing and Listing: 900,000 (locked for 2 months)

Community: 300,000 (locked for 1 month)

BogdaVault Minting

For every transaction, 256 \$BOG tokens will be minted in the BogdaVault. The amount minted will be halved on the first day of every month, or whenever the community decides to vote for it.

The mint rate will progress as follows:

256 >> 128 >> 64 >> 32 >> 16 >> 8 >> 4 >> 2

Eventually, the mint rate will stabilize at 2 BOG/txt

While minting new tokens for every txt makes \$BOG appear to be inflationary, you'll soon understand why it's necessary and how it will not affect prices.

Crowdsale (Increasing Price Crowdsale)

SUPPLY: 1,200,000 BOG

Stage 1: 3000 BOG PER ETH

(soft cap: 50 ETH; hard cap: 100 ETH [300,000 \$BOG])

Stage 2: 2500 BOG PER ETH

(hard cap: 240 ETH [600,000 \$BOG])

Stage 3: 2000 BOG PER ETH

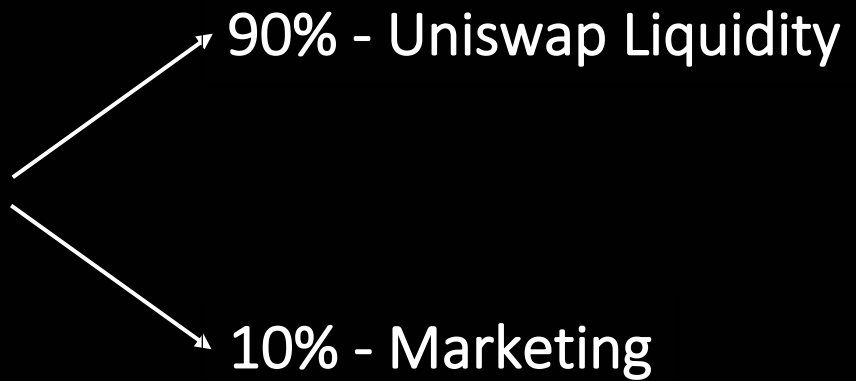

(hard cap: 150 ETH [300,000 \$BOG])

Max contribution: 10 ETH

Remaining BOG tokens will be sent to the BogdaVault OR airdropped to crowdsale participants

ALLOCATION OF ETH RAISED

To prevent embezzlement of funds, every transaction made with the marketing fund will be disclosed to the community through various channels such as Discord together with supporting evidence. The community will also have the power to vote on marketing decisions and veto transactions that are deemed to be unscrupulous.

Token Mechanism

The Bogs have installed Bogdabots to help enforce the following rules:

- Every time a person buys, there will be a 1 in 4 chance of an immediate pump
- Every time a person sells, there will be a 1 in 4 chance of an immediate dump
- The amount pumped or dumped by Bogdabots depends on the amount of token bought or sold. This helps to prevent price manipulation via repeated trivial transactions.
- Regardless of the transaction value, no more than 10% of BOGs in the liquidity pool will be affected for each transaction

Tokens in the BogdaVault will be used to regulate pumps and dumps. At the end of each season, the ETH collected in the BogdaVault will be airdropped to BOG hodlers based on the amount of BOG in their wallets.

Token Game

Old habits die hard. Occasionally, The Bogs would return to their old habit of performing scams on vulnerable people. In other words, they will use the BogdaVault to manually dump on others. The magnitude of these dumps will usually be greater than what the Bogdabots can achieve. However, for every manual dump comes a resultant manual pump, although they may not necessarily be consecutive events.

Their moves can be timed by solving a series of puzzles published on bogdanoff.finance. Piecing the jigsaw pieces together will bring you one step closer to the exact timing of The Bogs' next move. Whether it is a pump or a dump, however, you have to decide for yourselves.

By successfully timing these events, you will end up with more BOG in your wallets, which will ultimately increase your share of the BogdaVault pie.

Of course, high reward comes with high risk. The Bogs will not let you succeed that easily. But once you beat their expectations, something great will happen to you (more on that later).

QnA

In this section I will address potential concerns you may have. If you have other concerns, you can ask me in the Telegram/Discord group or drop me an email at lesfreresbogdanoff123@gmail.com

Q. What is the point of this shitcoin?

A. How dare you question The Bogdanoff Brothers? Read the quick rundown before it's too late.

Q. Is this a scam?

A. For obvious reasons I am unable to answer this with complete impartiality. Of course, I'll say that BOG is not a scam. Then again, 90% of crypto are scams. Why do you still invest? That's because you understand the risks that come with the rewards. Regardless of whether BOG is a scam, if you are a risk averse type of person, you should always cash out your initial amount and let the rest ride.

But to allay your fears, we will lock liquidity for all relevant wallets.

Q. Swingies get the rope. Why should I invest in this token as a hodler?

A. Precisely because swingies get the rope. When swingies buy high and sell low, your share of BOG tokens will naturally increase, which means that you will receive a larger stack from the Bogdavault. Although successful swingies may negate the effect, what are the statistical odds of timing the market successfully? In other words, even by doing nothing (hodling), you could potentially still profit from others' mistakes.

Q. Are there any future developments?

A. Yes! We are planning to implement yield farming functionality by 2021/Q1 if BOG becomes a success. You could potentially yield farm two different tokens based on market movement. More on that later.

Credit and Acknowledgement

As omniscient beings of the universe, The Bogdanoff Brothers would like to thank no one.
